

Business Sales Performance Analytics Report

Future Interns – Data Science & Analytics Internship

Task 1: Business Sales Performance Analytics

Prepared by: Sai Akella

1. Objective

The objective of this project is to analyze business sales data and identify important revenue trends, store performance, holiday sales impact, and the relationship between unemployment and weekly sales. The dashboard helps in understanding business performance through visual analytics and KPI monitoring.

2. Tools Used

- Power BI
- Excel/CSV Dataset

3. Key Performance Indicators (KPIs)

- Total Sales: 6.74 Billion
- Average Weekly Sales: 1.05 Million
- Average CPI: 171.58
- Average Unemployment: 8.00

4. Dashboard Analysis

A. Weekly Sales Trend Analysis

A line chart was used to analyze weekly sales trends over time.

Observations:

- Sales showed fluctuations across different periods.
- Certain weeks experienced sharp sales peaks.
- Sales remained relatively stable during most periods with occasional spikes.

B. Holiday vs Non-Holiday Sales Analysis

A bar chart was used to compare sales during holiday and non-holiday periods.

Observations:

- Holiday periods generated slightly higher average sales compared to non-holiday periods.
- Customer spending increased during holidays.

C. Store Performance Comparison

A bar chart was created to compare sales performance across stores.

Observations:

- Some stores consistently outperformed others.
- Certain stores generated significantly higher weekly sales.

D. Unemployment Scatter Analysis

A scatter plot was used to analyze the relationship between unemployment and average weekly sales.

Observations:

- Most stores were clustered around unemployment rates between 6 and 9.
- Sales performance varied across different unemployment levels.
- No perfect linear relationship was observed.

5. Overall Findings

- The business generated strong total sales revenue.
- Holiday periods positively influenced sales performance.
- Some stores consistently contributed higher revenue.
- Weekly sales trends showed fluctuations and seasonal patterns.
- Economic factors like unemployment may affect customer spending behavior.

6. Recommendations

- Increase marketing efforts during holiday seasons to maximize sales.
- Study high-performing stores and apply similar strategies to low-performing stores.
- Monitor economic indicators such as unemployment and CPI for future business planning.
- Use dashboard insights for better inventory and sales management.

7. Conclusion

The Business Sales Performance Analytics Dashboard successfully provides insights into sales performance, store comparisons, and economic influences on business revenue. The dashboard supports data-driven decision-making and can assist businesses in improving sales strategies and operational performance.
